Sales Trend : Month-wise

Exploratory Data Analysis

Observations & Conclusions from the EDA:

- Customers visit the cafe most on Saturday followed by Sunday and Friday
- Customers visit mostly in the evening's specifically between 5:00 PM to Midnight, 8:00PM bringing the maximum sales
 - Interesting thing to note is inspite of 8:00PM and 7:00PM recording the most amount of sales, its the hours 11:00 PM and 12:00PM which brings equal or more revenue despite relatively lower sales
- There are 9 menu items which can immediately removed from the menu as they have recorded absolutely zero sales over the 10 month period.
- Most Sold categories in terms of quantity is FOOD, BEVERAGES, TOBACCO, LIQUOR
- Despite previous point, Tobacco category records the maximum amount of revenue, where as food category despite giving out maximum discounts records less revenue than Tobacco
- Sales trend show sales pick up in Summer i.e July-August and in Winter i.e. December & Jan
- December 2010 and Jan 2011 are the top 2 revenue grossing months
- 31st December 2010 is the single day which grossed almost 40% more revenue than the next highest revenue day

Menu Analysis

Association Rule Mining

- Association rules are written in “IF-THEN” format
- IF - LHS & THEN - RHS. Here, if a is purchased then b is also purchased
- Item sets illustrated in the following manner: a,b, count
- An Item set is a mathematical set of products in the basket.
- Apriori algorithm envisions an iterative approach where it uses k-Item sets to search for (k+1)-Item sets. The first 1-Item sets are found by gathering the count of each item in the set. Then the 1-Item sets are used to find 2-Item sets and so on until no more k-Item sets can be explored; when all our items land up in one final observation. One exploration takes one scan of the complete dataset.
- A rule with high lift but little support might be a coincidence or a flavor of some particular customer, and that a rule with high lift but little confidence means that the occurrence of Y is still too unlikely comparing to other items, therefore hard to create value in business.

Menu Analysis

Association Rule Mining

- With these in mind, our way of creating rules would be setting a minimum support and confidence, then sorting by lift to find the most important rules among all.
- The rules with confidence of 1 imply that, whenever the LHS item was purchased, the RHS item was also purchased 100% of the time.
- A rule with a lift of 2 imply that, the items in LHS and RHS are 2 times more likely to be purchased together compared to the purchases when they are assumed to be unrelated.
- I ran the association Rule Mining algorithm on the transactional data and came up with 53 rules.
 - Parameters used were:
 - Support: 0.001 (1% of the transactions)
 - Confidence: 0.1

## [5]	{ADD HAZELNUT FLAVOUR}	=> {CAPPUCCINO}	0.001371781	0.4637681	5.935519	96
## [6]	{VANILLA ICECREAM}	=> {GREAT LAKES SHAKE}	0.001243177	0.4123223	5.923863	87

Menu Analysis

Results from Association Rule Mining

Following Items are always purchased together

- Caffè Latte with Hazel Nut Flavour
- Cappuccino with Hazel Nut Flavour
- SAMBUCA with Red Bull
- Great Lakes Shakes with Vanilla ICE Cream
- B.M.T. Panini with French Fries
- SATAY Chicken Panini with French Fries
- Country Roast Chicken Panini with French Fries
- NIRVANA Hookah with Mineral Water Bottle

Menu Analysis

Results from Association Rule Mining

Combo Meal Suggestions:

- B.M.T. Panini with Caffe Latte or Cappuccino with French Fries
- B.M.T. Panini with Sambuca & with Poutine
- SATAY Chicken Panini with French Fries & with SAMBUCA with Red Bull
- Country Roast Chicken Panini with French Fries with Great Lakes Shakes with Vanilla ICE Cream
- SATAY Chicken Panini with Caffe Latte or Cappuccino with French Fries
- Nirvana Hookah with Poutine & B.M.T. Panini & with Mineral Water
- Nirvana Hookah with Poutine & B.M.T. Panini with Red Bull or Shake
- Bun Maska & Chai
- Veg Club Wrap with Poutine with Fries

Price Analysis

- For the sake of simplicity and narrow down products, we looked at only those menu items whose rates changed more than twice in the dataset

Positive Impact of Price Change

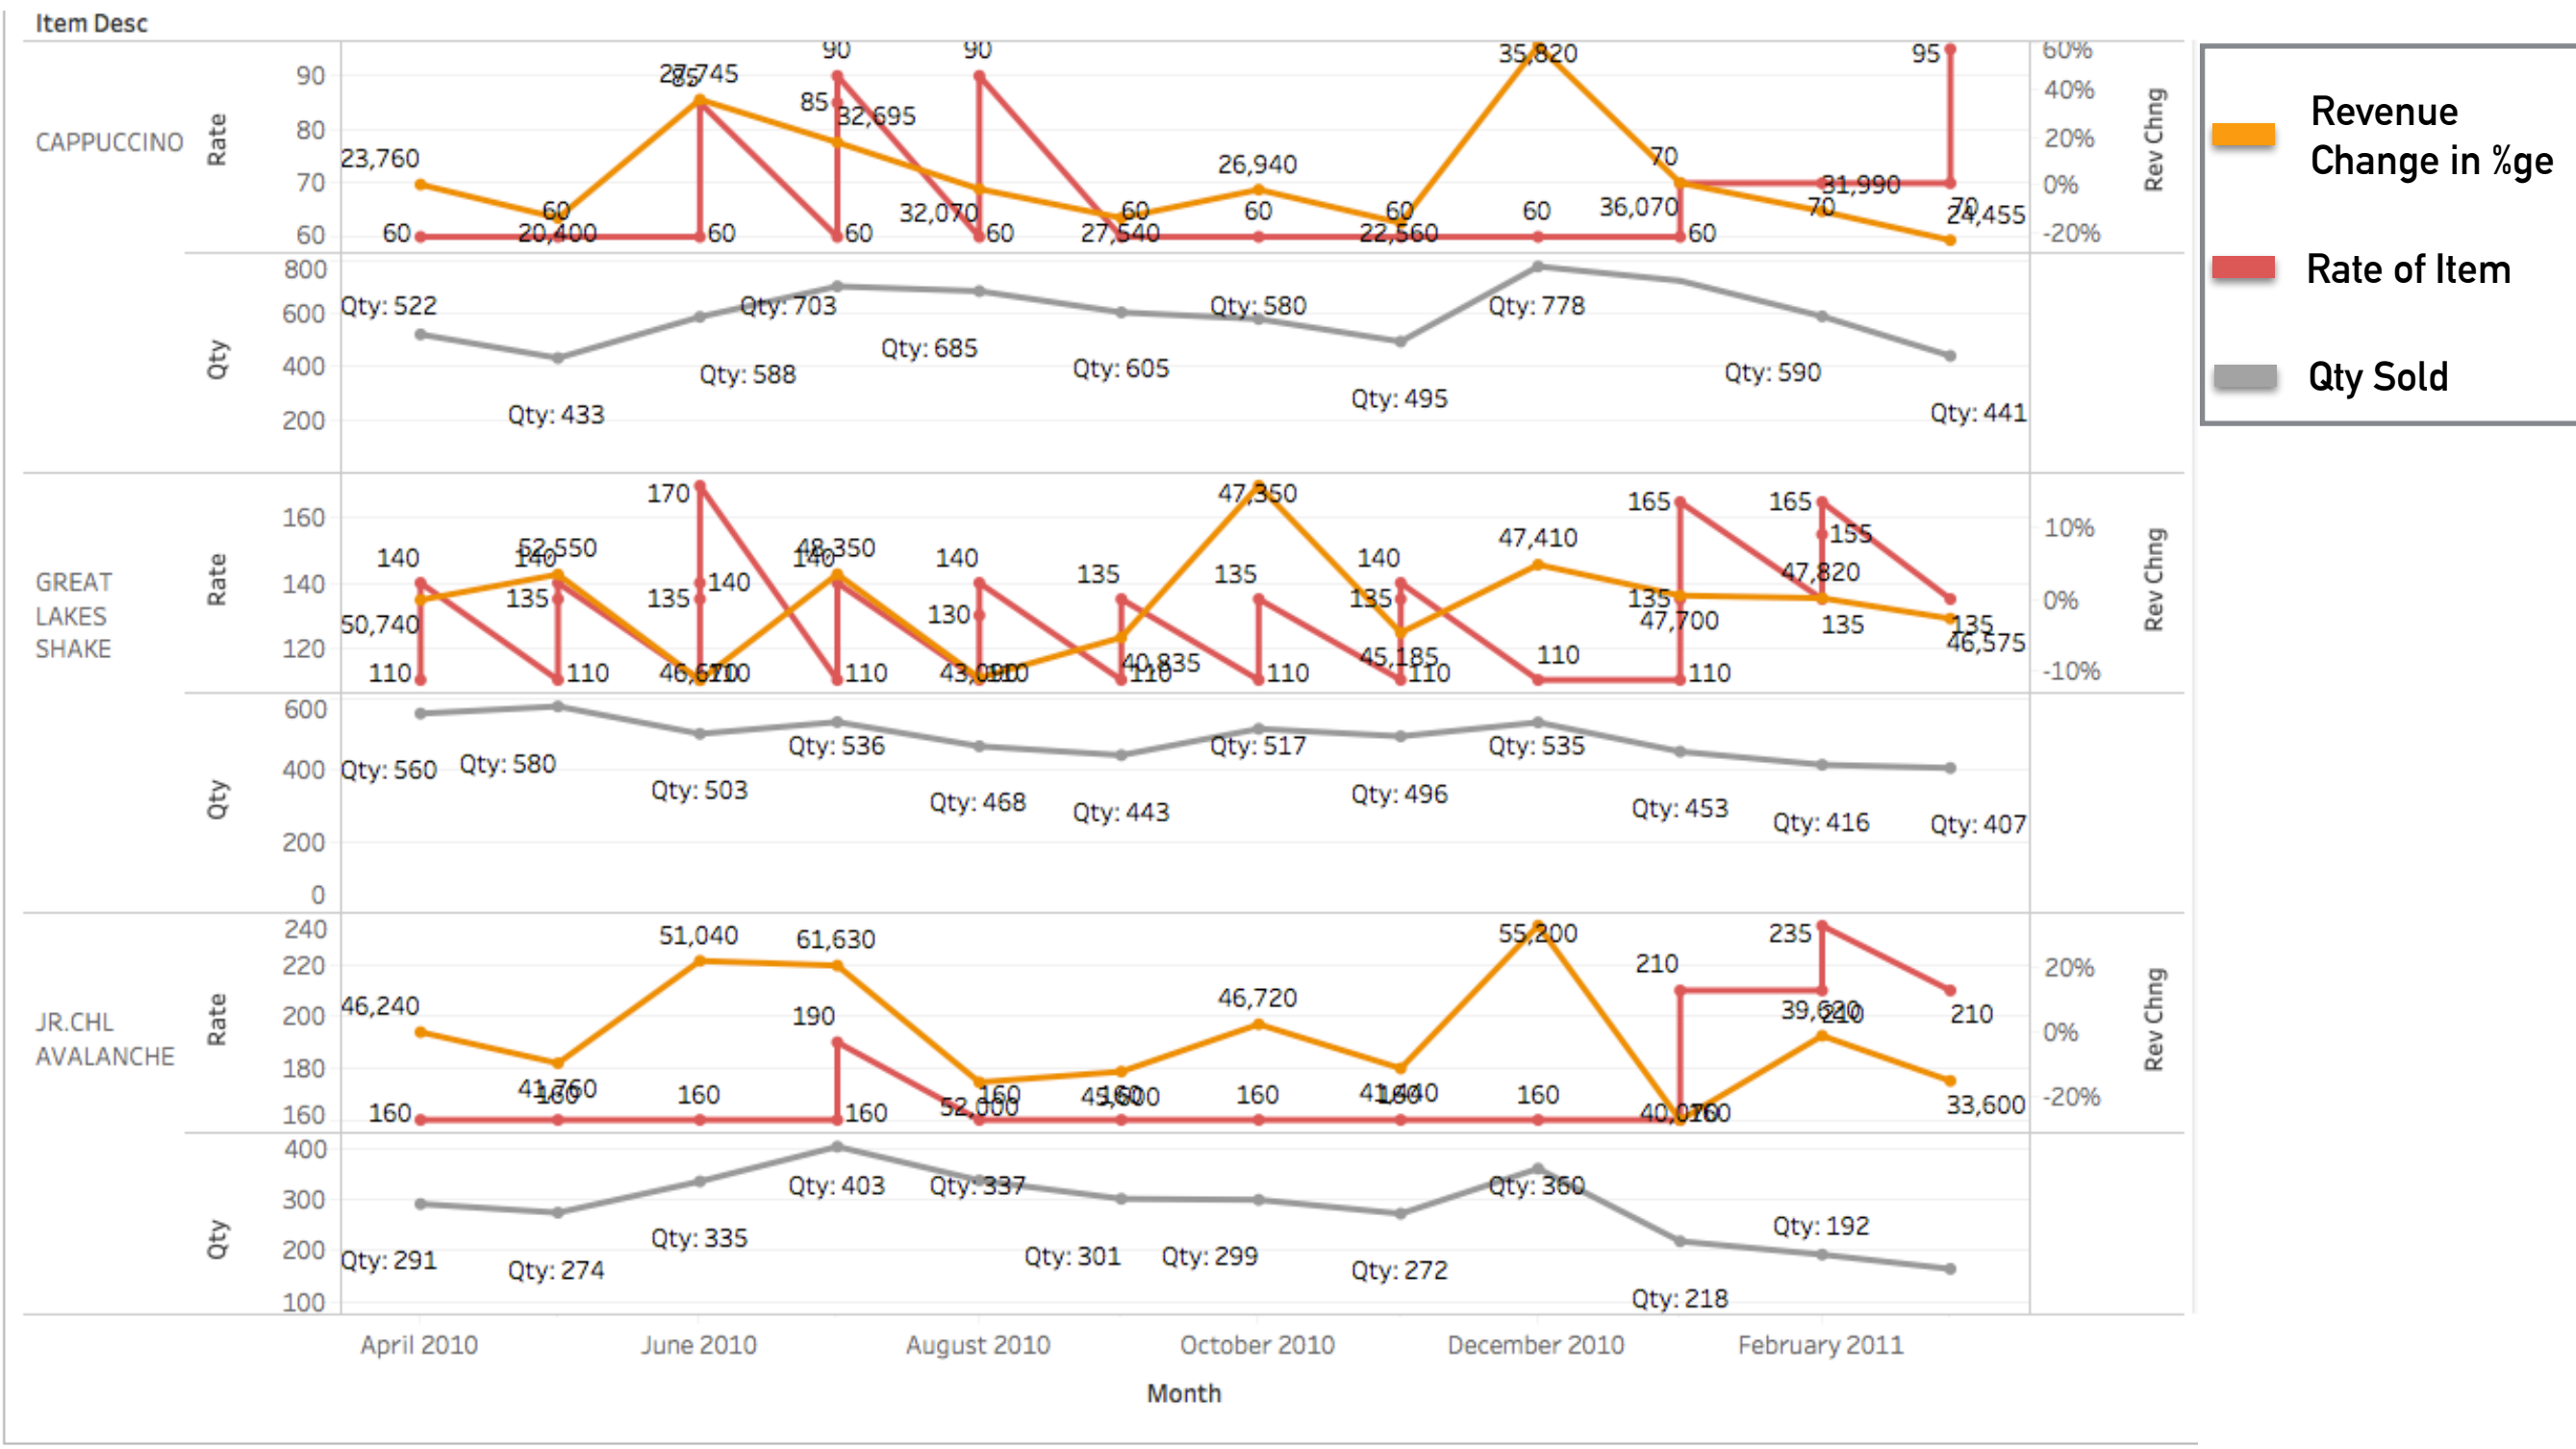

- Following Items increased in sales despite of rates increase:
 - Asian Wok Tossed Salad
 - MAGGIE NDL ARRABIATA
 - Lemon Infused Char Grilled Veg

Negative Impact of Price Change

- Almost all menu items saw a negative impact of the price change, Products like Cappuccino, Cafe Latte, Shakes, changed prices almost on a monthly basis, accordingly revenue was also directly affected. Though, maybe due the seasonality or some other factor, price change affected some items positively while other times it affected negatively
